

STABU specification service

STABU is the leading system specification for the B&U. With a STABU system service you support your customer in making a good choice. A specification service is in line with system thinking that construction requires. ZeeBoer has been developing manufacturer-product specifications for STABU specifications since 1984. The specifications are a smart contract document that can also be used in a BIM process via OSF or NISfB. In combination with the BIM link between Utopis® Platform and VerTeX from Bimforce, your product information is also linked to the BIM model.

Utopis® Platform is not an average "PIM"

Utopis® Platform (UP) is the product information management system (PIM) for construction. UP is multi-deployable and distributes information from one central source. A system configurator in UP uses information that can also be used for other purposes. Think of documentation sheets, processing instructions, an advice tool, reference module or DoP generator.
