

Your solutions in BIM

Utopis® Platform connects your assortment and solution to BIM software such as Revit and Archicad. Of course in a smart forward-looking way. No static models, but a current, maintenance-friendly catalog as a result. Our collaboration with VerteX, the BIM solution by Bimforce, enables us to map your product information to the existing models in Revit and Archicad.

Utopis® Platform responds to the many specific software packages used in the BIM landscape. In addition, the many versions and languages that Revit and Archicad have developed have been met. Because you manage yourself or synchronize with your existing ERP or PIM, your BIM library remains up-to-date. A future-proof investment.

Utopis® Platform is not an average "PIM"

Utopis® Platform (UP) is the product information management system (PIM) for construction. UP is multi-deployable and distributes information from one central source. A system configurator in UP uses information that can also be used for other purposes. Think of documentation sheets, processing instructions, an advice tool, reference module or DoP generator.
